

GYPTECH

GypAcoustic Baffle System:

PROPERTIES:

- ✓ Great Sound Absorption
- ✓ Textured fibrous panels in more than thirty colors
- ✓ Manufactured from 65% polyster
- ✓ Moisture resistant
- ✓ Odourless, low-VOC, and non-toxic
- ✓ Fire resistant
- ✓ Lightweight (2.4kg/m2) for 12mm thick panel.

ATTRIBUTES:

- ✓ Average depth of 150 - 600 mm
- ✓ Fire Rating ISO 9705:1993 Group 1
- ✓ ASTM E84 Class A
- ✓ Length 24000mm
- ✓ 100% PET

Colors Selection

Acoustic Properties:

How can we reduce unwanted noise?

We incorporate GypAcoustic Baffles ceiling to reduce unwanted sounds and echos. Up to 100% of sound can be absorbed by utilizing our panels of the appropriate thickness. Our acoustic wall panels have been tested in third party laboratories in a reverberation chamber, and have achieved Noise Reduction Coefficients (N.R.C) as shown. Low-frequency absorption can be increased by installing the panels with an air gap behind them, or by increasing the thickness of the panel.

	Sound Absorption Coefficients at Various Frequencies (Hz)						
Thickness	125	250	500	1000	2000	4000	N.R.C
9 mm	0.30	0.65	0.60	0.80	1.00	1.00	1.00

Installation Methods

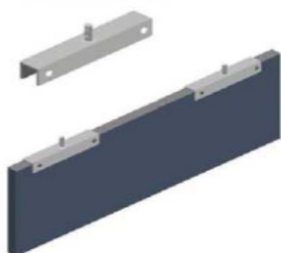

Direct Mount U-Channel

Direct mount U-Channel for drywall or wood ceiling

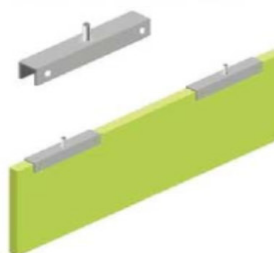

Male U-Channel

Male 1/4-20 threaded rod attaches to standard hanging hardware

Female U-Channel

Accepts 1/4-20 threaded bolt for concrete ceiling or other installation

Eyebolt U-Channel

Eyebolt solution for cable or chain hanging

Components:

We pay attention to the components we use. This is why our baffles are the best in the market. Depending on the choice of the baffle, the material is chosen.

RISK FREE CHOICE:

Our experience in baffle ceiling spans more than 10 years in installation and maintenance. GypTech is determined to manufacture all the baffles with high quality and this shows by the warranty that we offer that covers many aspects of the installation and maintenance.
